

SWIM-Pool

What does it do?

SWIM-Pool shares Bilateral messages between Wholesalers and Retailers within the Non-Household Market allowing the sharing of information, requests and resolutions including exchanging meters.

Key features of SWIM-Pool include the -

- SWIM-Pool connects internal systems with the Bilateral Hub enabling jeopardy management and reporting functionality.
- SWIM-Pool also comes with configurable inbuilt functionality which limits what transaction types can be sent to each environment, thus aiding the accreditation process.
- By using the Market Data Set (MDS) SWIM-Pool matches SPID to customer address and validates processes prior to submission to the HUB.
- SWIM-Pool GUI and its underlying database provide and account for a clear separation of data sent and received from each environment. That means that a message marked as to be sent to the test environment via the API will only be sent to the test environment and any related messages received will also be marked as belonging to the test environment.
- Allows the user to switch which environment, and in the case of a user having access to more than one market participant - which market participant, is currently being displayed.

Who uses it?

SWIM-Pool is used by Wholesalers and Retailers in the Non-Household Water Market. It can be used as a front end or as middleware to transfer all the electronic transactions involved in switching customers along with meter reads to provide water usage and settlement data.

Is it Market Compliant?

SWIM-Pool is fully compliant with industry change. The C&C Product Manager regularly checks for new and updated Code and Non-Code Changes.

Is it integrated with other applications / the wider market?

SWIM-Pool integrates with SWIM-Ware another CandC product supporting the NHH Market. SWIM-Pool connects with the Bilateral Hub for the transferring of Bilateral Messages.

Who do I contact if I have any questions?

Please contact the SWIM-Pool Senior Product Manager Pam Nash via email or phone -
